

## PrecisionEffect and SurveyHealthcare Knee Implant Patient Survey 2018

In 2018, Conformis engaged independent third-party researchers to conduct a study of patient satisfaction with knee implants – Conformis vs. Non-Conformis.

The results of this third-party study show that the vast majority of Conformis patients are confident and satisfied with their knee replacement, and are highly likely to recommend the knee to a friend or colleague.

Additional details on survey respondent recruiting is available upon request.
